TEVITA MATHIAS

Oak Harbor, WA | mathias.tevita@icloud.com | linkedin.com/in/tevita-mathias | github.com/aldohl95

EDUCATION

Skagit Valley College — Bachelor of Science in Computer Science **Expected June 2027**

GPA: 3.5

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Discrete Mathematics, Linear Algebra, Web Application Development, Software Development Tools, Cloud Fundamentals, UX/UI Design

PROJECTS

SaveMySeat — Event Ticketing & Reservation API | *github.com/aldohl95/SaveMySeat* **Java, Spring Boot, PostgreSQL, Docker**

- Designed and deployed a REST API for event ticketing ~20 endpoints spanning venues, events, ticket tiers, and holds using Java 25 and Spring Boot 4 in a layered, feature-based architecture with strict DTO boundaries, shipped through a GitHub Actions CI pipeline in Docker.
- Eliminated ticket overselling by enforcing a capacity − sold − reserved inventory invariant under PostgreSQL row-level pessimistic locking, verifying zero oversells across 50 concurrent hold attempts in a multithreaded Testcontainers integration test.
- Chose pessimistic over optimistic concurrency after analyzing peak-contention behavior serializing writers avoids retry storms when many buyers target one ticket tier and documented the trade-off in an Architecture Decision Record.
- Modeled a time-boxed hold lifecycle (active → converted, released, or expired) with scheduled expiry sweeps returning unsold inventory to the pool inside transactional boundaries.
- Secured the API with stateless JWT authentication, refresh-token rotation with reuse detection, BCrypt password hashing, and method-level ownership authorization in Spring Security; standardized failures as RFC 7807 Problem Details with field-level validation errors.
- Versioned schema changes with Flyway migrations, added targeted indexes on high-traffic hold lookups (tier_id, user_id), and paginated every list endpoint.

InterviewPrep CLI — Spaced-Repetition Interview Prep Tracker | *PyPI: interviewprep-cli* **Python**

- Shipped a pip-installable CLI to PyPI that schedules technical-interview review using spaced repetition weighted by self-rated difficulty and hint usage, with streak tracking and a progress dashboard.
- Implemented full CRUD attempt logging and JSON import/export with merge and replace modes; validated behavior with 42 pytest tests and published contributor documentation (SPEC, CONTRIBUTING, PR templates).

Task Mentor — Team Task-Mentoring Platform | *github.com/don-strong/task-mentor* **Spring Boot, React**

- Led a 4-person team as project manager on a full-stack mentoring platform, authoring 61 of 92 commits and running branch strategy and pull-request review through production deploys on Render and Netlify via Docker.
- Owned authentication end to end — Spring Security JWT backend through React protected routes and auth context and delivered the dashboard search feature.
- Unblocked teammates by diagnosing cross-cutting CORS, routing, and frontend–backend integration defects late in the release cycle.

EXPERIENCE

Store Manager — Gamers Only | Hinesville, GA **May 2018 – December 2022**

- Grew store revenue 32% by pitching ownership on expanding to the TCGplayer online marketplace, then leading the rollout listing card inventory online and standing up order fulfillment.
- Hired, trained, and scheduled a 4-person team while owning daily operations, purchasing, and inventory control for a gaming and trading-card retail store.

SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Hibernate, React

Infrastructure & Data: PostgreSQL, Flyway, Redis, Docker, Docker Compose, GitHub Actions, Linux, AWS (foundational)

Testing & Practices: JUnit 5, Testcontainers, pytest, integration testing, REST API design, JWT authentication, Git/GitHub, Maven
